INTANGLES
A DIGITAL TWIN COMPANY

Our Solutions

We are helping over 21,000 fleet operators across 17 countries in monitoring, benchmarking, and implementing predictive maintenance strategies for their assets, ultimately enhancing overall uptime and profitability.

Equipment Maintenance

Receive real-time data on equipment health, engine diagnostics, fluid levels, and equipment usage, which helps identify potential maintenance issues before they become major problems.

Fuel Optimization

Receive insights on fuel usage, including idling time and fuel consumption rates, which allows you to optimize fuel consumption and reduce costs.

Equipment Utilization

Get better visibility on asset usage, hours of operation, and job completion rates, to optimize equipment utilization and increase uptime.

Crop Management

Receive insights on environmental factors that affect crop growth, such as soil moisture and temperature, to optimize irrigation and fertilizer application, reducing costs and maximizing yields.

Improve Safety

Track asset location, speed, and other factors to identify potential safety hazards and prevent accidents.

Enable Precision Farming

Mitigate the risks caused by uncertain parameters using location tracking. Optimize yield through data-driven decision-making.
